YouTube Channel Performance Report

Madan Gowri channel | All videos, 2016 to July 2026 | Prepared by Bhuvi, Data Analyst Intern

1. Purpose

This report looks at every video on the channel, from the first upload to the latest data pull, to answer three questions: how the channel has grown, where it is strongest, and what to do next to keep growing. It also lists topics that content research could look into.

2. Summary at a glance

Measure	Value
Videos analysed	4,668
Total views	3.16 billion
Total likes / comments	140 million / 7.4 million
Overall engagement rate	4.66%
Average views per video	about 677,000
Best year by views	2025 (0.48 billion)
Videos worth promoting again	92 (2% of videos, 46.3M views)

Three things to take away

- **The channel is large and growing.** Views from each year's uploads rose almost every year from 2017, reaching 0.48 billion in 2025.
- **Growth has come from uploading more.** Uploads doubled from 403 in 2022 to 832 in 2025, while average views per video moved from 0.93M to about 0.57M.
- **Viewer interaction is the biggest gap.** Engagement was 6.5% for 2021 uploads and is 2.6% for 2026 uploads, mostly because comments per view have fallen.

3. How the analysis was done

- Data: video-level YouTube data (views, likes, comments, duration, publish date) for 4,668 videos, extracted on 20 July 2026.
- Tool: Power BI, with a three-page dashboard (shown below).
- Engagement rate = (likes + comments) divided by views. I checked that the dashboard totals match the raw data.
- Year figures are grouped by the year a video was published, not by the year the views were earned.

4. Dashboard 1: Channel overview

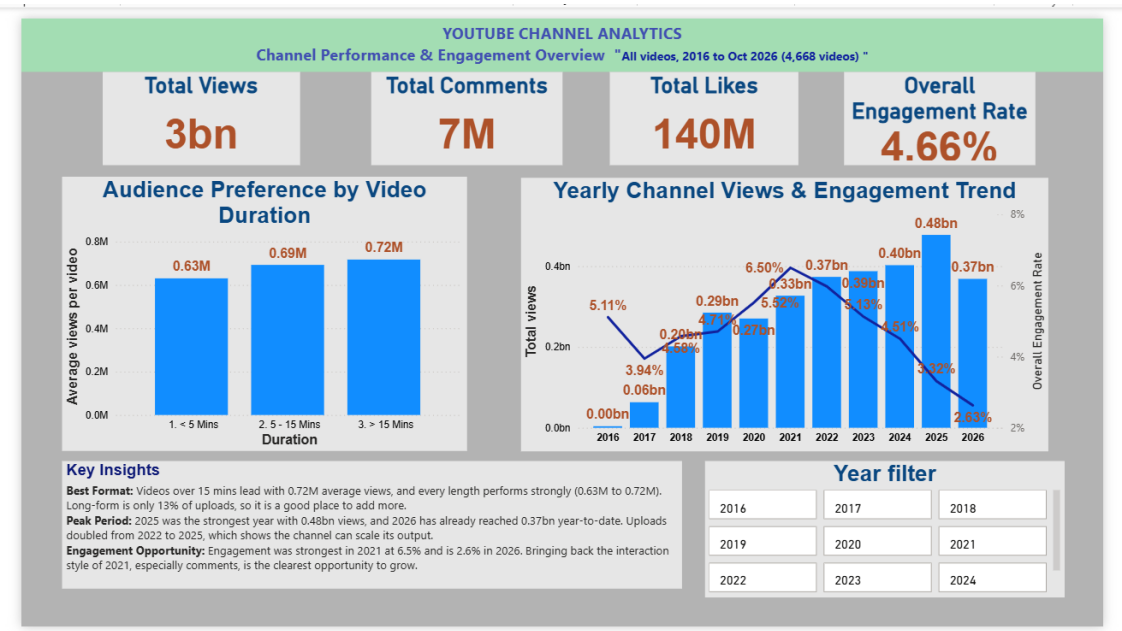

Figure 1. Channel totals, views by video length, and yearly views with engagement trend.

- **Video length:** videos over 15 minutes average 0.72M views, 5 to 15 minutes 0.69M, and under 5 minutes 0.63M. Every length performs well.
- **Mix of uploads:** 57% of videos are 5 to 15 minutes, 30% are under 5 minutes, and only 13% are over 15 minutes. Long videos have the highest average views but are the smallest share of uploads.
- **Peak:** 2025 uploads reached 0.48 billion views. 2026 is part-year, so it is not a fair comparison yet.

5. Dashboard 2: Video performance

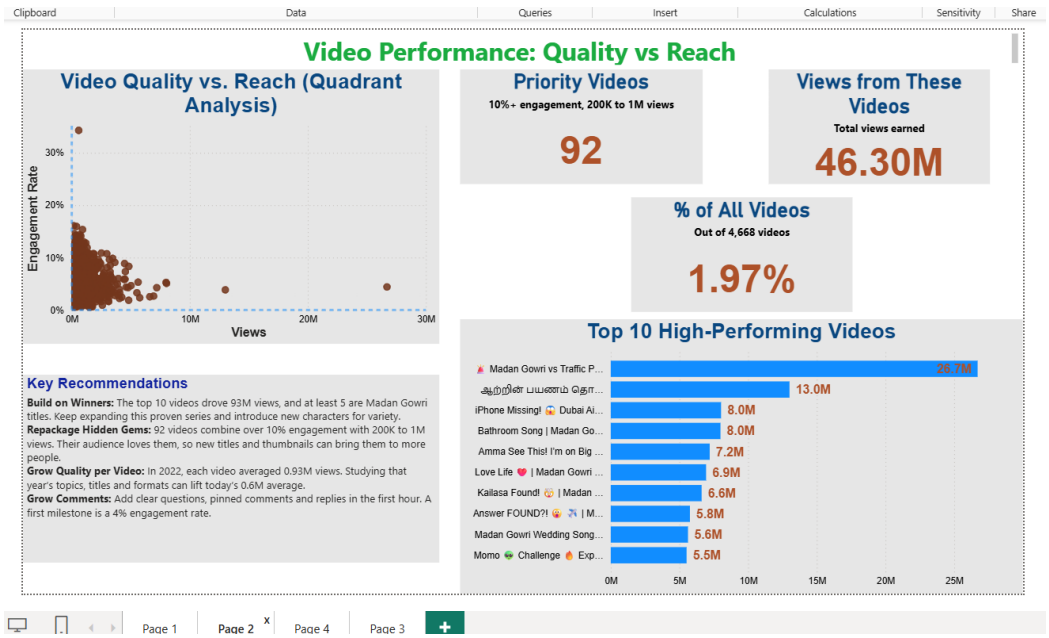

Figure 2. Reach versus engagement for each video, top 10 videos, and the 92 videos worth promoting again.

- **Top 10 videos:** together 93.4M views, about 3% of all views. Growth comes from steady volume across many videos, not only a few big hits.
- **Videos worth promoting again:** 92 videos have over 10% engagement but only 200K to 1M views. Viewers who find them respond strongly, so a better title and thumbnail may bring them more reach. These videos have already earned 46.3M views.

6. Dashboard 3: Growth trends

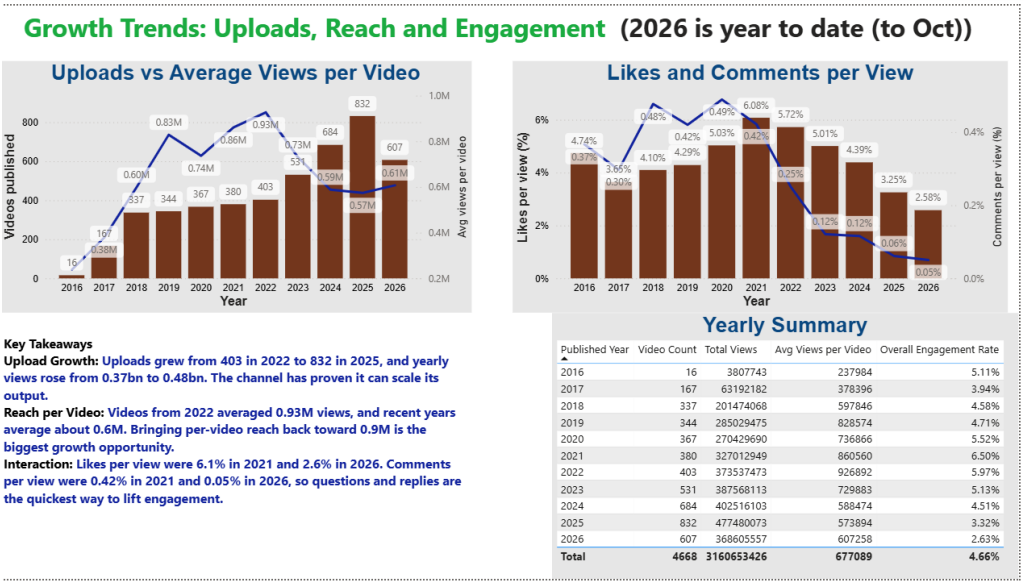

Figure 3. Uploads versus average views per video, likes and comments per view, and the yearly summary.

7. Growth story by year

Year	Videos	Total views	Avg views / video	Engagement
2019	344	285M	829K	4.71%
2020	367	270M	737K	5.52%
2021	380	327M	861K	6.50%
2022	403	374M	927K	5.97%
2023	531	388M	730K	5.13%
2024	684	402M	588K	4.51%
2025	832	477M	574K	3.32%
2026 (part year)	607	369M	607K	2.63%

2016 to 2018 are left out of this table for space (16, 167 and 337 videos). They are in the dashboard.

- **Likes per view:** 6.1% for 2021 uploads, 2.6% for 2026 uploads.
- **Comments per view:** 0.42% for 2021 uploads, 0.05% for 2026 uploads. This is the largest change in engagement.

8. Recommendations

- **Study 2022.** That year's videos averaged 0.93M views each. Compare their topics, titles, thumbnails and length with recent uploads to find what to repeat.
- **Promote the 92 videos again.** Test new titles and thumbnails on a small group first, then compare views after four weeks.
- **Try more long videos.** Videos over 15 minutes have the highest average views but are only 13% of uploads. Test a few a month.
- **Lift comments.** Ask a clear question in each video, pin a comment, and reply in the first hour. A first target is 4% overall engagement.
- **Keep building proven series,** and test new formats alongside them.

9. Ideas for content research

- Which topics and series sit behind the top 10 videos, and how often can they be repeated?
- What did the 2021 and 2022 videos do differently to get higher engagement and views per video?
- What do viewers of the 92 high-engagement videos ask for in comments?

10. Limits of this analysis

- Views count up over time, so newer videos have had less time to collect views, likes and comments. Part of the fall in recent averages is due to this, not only to content.
- The data was pulled on 20 July 2026, so 2026 covers about seven months of uploads. The dashboard subtitle says "to Oct 2026", but no later data is included.
- Years with few videos (2016: 16, 2017: 167) are less reliable.
- This data shows what happened, not why. The recommendations are ideas to test, not proven causes.
